PROJECT-BASED LEARNING PRODUCT

1.1 Product Description

The Mobile Scale application is a program installed on a smartphone or tablet to weigh various objects, such as fruit, spices, and others, with a maximum weight of 10 kg. This app allows users to easily and accurately measure the weight of objects. Users can also convert weight units between grams, kilograms, and ounces, as well as calculate the total weight of multiple objects individually.

1.2 Product Design

Product design for a mobile application project should have the following design:

1. General system description.

Mobile Scale App is an application that allows users to weigh items easily and accurately using their smartphones. This app is designed to assist users in various situations, such as:

- Weighing items at home: Users can weigh items at home, such as groceries, packages, or other goods.
- Weighing items at stores: Users can weigh items at stores before purchasing to ensure they get the correct weight.
- Weighing items at the office: Users can weigh items at the office, such as documents, packages, or other goods.

The app has several key features, including:

- Item weighing: Users can weigh items by placing them on their smartphones. The app utilizes the smartphone's accelerometer sensor to calculate the item's weight.
- Data recording: Users can record data about the items they have weighed, such as item name, weight, date and time of weighing, and other information.
- Weighing history: Users can view their weighing history within the app. This can help users track the weight of items they have weighed.

2. Functional System Requirements

The Mobile Scale App must meet the following functional system requirements:

Core Features:

Item weighing:

- Weighing accuracy: The app must weigh items with an accuracy of at least 95%.
- Weighing capacity: The app must weigh items with a maximum weight of 10 kg.

- Weighing units: The app must support various weighing units, such as grams, kilograms, pounds, and ounces.

Data recording:

- Users must be able to record item name, weight, date and time of weighing, and other information.
- Weighing data must be stored securely on the user's device.
- Users must be able to export their weighing data to CSV format or other formats.

Weighing history:

- Users must be able to view their weighing history.
- Weighing history must be sortable by date, time, item name, or weight.
- Users must be able to delete their weighing history.

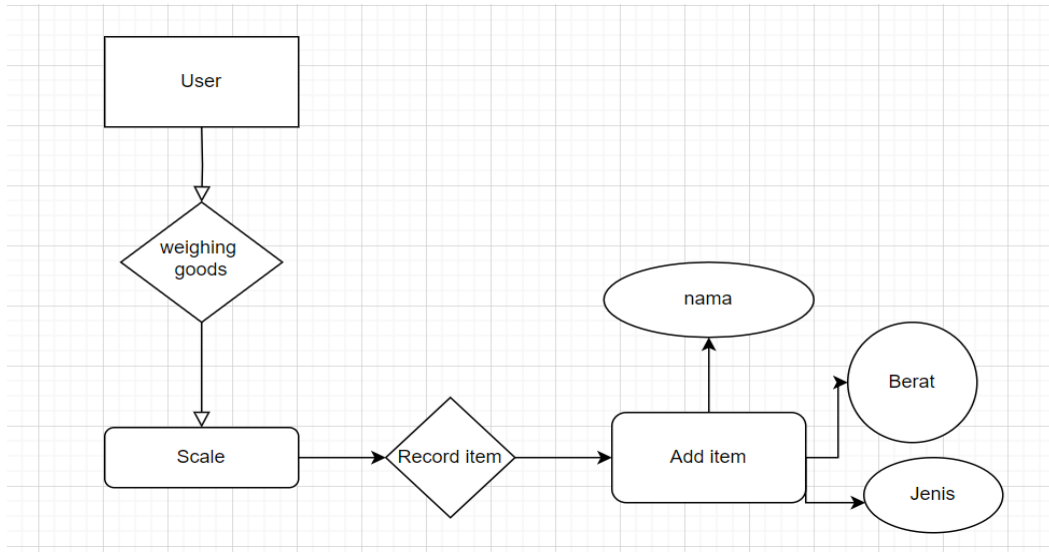

3. Use case

The description of the Use Case diagram of the QuickTemp application:

- Home Screen: Users start on the home screen, where they can choose to weigh a new item, record a previously weighed item, or view their weighing history.
- Item Weighing Screen: If users choose to weigh a new item, they are directed to the item weighing screen, where they place the item on the device and measure its weight.
- Item Recording Screen: Once the weight is measured, users can proceed to the item recording screen to capture details about the weighed item, such as its name, weight
- Weighing History Screen: Users can access their weighing history at any time by selecting the "History" button on the home screen. This screen provides a comprehensive overview of previously weighed items and allows for filtering and searching

4. ER diagram.

The ERD represents the relationships between the core entities in the mobile scale app:

Item: This entity represents the items being weighed by the app. It has attributes like item_id, item_name, item_type, and weight.

Weighing: This entity represents the weighing events, capturing the weight measurements for each item. It has attributes like weighing_id, item_id, weight, date, and time.

5. Product interface/architecture design.

6. Programming Language

Flutter, an open-source framework powered by the Dart programming language, revolutionizes cross-platform development by enabling developers to create stunning and dynamic user interfaces that seamlessly adapt across Android, iOS, web, and desktop platforms from a single codebase. With Dart's modern and efficient features such as a strong type system and automatic memory management, Flutter empowers developers to craft responsive and high-performance applications without compromise. This combination of a powerful framework and a versatile programming language positions Flutter as the go-to solution for developers seeking to deliver innovative, feature-rich applications with speed, efficiency, and unparalleled quality.

2. PRODUCT IMPLEMENTATION

2.1 Product Implementation

Product implementation for mobile application projects:

1. Implementation for user interface / product design.

Welcome page

welcome screen display menu on the mobile scale application.

Home page

Item Weighing Screen:

The item weighing screen displays the current weight of the item being weighed. It also has a button to tare the scale, which resets the weight to zero.

- The home screen displays the current time and date.
- It also has three buttons:
 - **Weigh Item:** This button opens the item weighing screen.
 - **Record Item:** This button opens the item recording screen.

Add item page

The add item screen displays a form for users to enter information about the item they are weighing.

The form includes fields for the following information:

- **Nama:** The name of the item
- **Berat (kilogram):** The weight of the item in kilograms
- **Jenis:** The type of item

The screen also has a button to **Add** the item to the app's database.

2. Product testing result.

No.	Pernyataan	Sangat mudah (%)	Mudah (%)	Netral (%)	Sulit (%)	Sangat Sulit (%)
1	Seberapa mudah dipahami navigasi aplikasi mobile scale ini?	76,5	12,4	7,3	1,8	2

No.	Pernyataan	Sangat cepat (%)	Cepat (%)	Kurang Cepat (%)	Tidak Cepat (%)
1	Seberapa cepat aplikasi Mobile scale memuat data?	72,1	24,5	3,2	0,2

CONCLUSION

1. Obstacle

There were several obstacles that we encountered when working on this PBL project, including:

- a) At the start of the we experienced problems with a lack of tools such as breadboards and sensor support equipment.
- b) Arduino cannot be connected to the laptop.
- c) Create coding for scale applications.

2. Learning Process

The process for working on this PBL is as follows:

- a) In the first week we were still learning the tools and their functions.
- b) There are several logo image references that we took from the internet.
- c) Solution to the Arduino problem that is not connected, we looked for information on YouTube, from the same PBL team and used reason.

APPENDIX I – LOGBOOK

ID	Tahapan	Detail Pengerjaan	Ouput	Mulai	Selesai	Progress	#
1	Planning	Pada minggu pertama kami melakukan meeting dengan manager proyek dari aplikasi mobile scale, dan kami membahasa tentang alat-alat dan kebutuhan yang di perlukan selama proses pembuatan aplikasi mobile sclae	-	2024-02-15	2024-02-20	8%	Hapus
2	Analysis	Kami melakukan pengecekan harga dari barang barang yang ingin kami beli untuk membuat aplikasi mobile scale di online shop maupun offline store	-	2024-02-21	2024-02-27	15%	Hapus
3	planning	diminggu ketiga ini kami lebih fokus dalam membuat UI yang sangat berguna untuk pembuatan aplikasi mobile scale ini. Disini kami fokus merancang dan membuat sistem UI ini	-	2024-02-28	2024-03-03	20%	Hapus
4	implementasi	pada minggu ke-empat ini, kelompok kami melakukan coding menggunakan flutter dan memulai proses debugging untuk mengidentifikasi penyebab error pada beberapa fitur dan komponen tertentu	-	2024-03-04	2024-03-10	28%	Hapus
5	implementasi	pada minggu ke-lima ini, kelompok kami melakukan percobaan sensor pada arduino yang sudah di rancang. kami melakukan pengetesan guna untuk mengetahui apakah arduino kami berfungsi dengan baik atau tidak	-	2024-11-03	2024-03-17	35%	Hapus
6	Implementasi	pada minggu ke-enam ini, kelompok kami membuat mekanis dudukan untuk load cell dan juga membuat penampang untuk benda yang akan diukur beratnya	-	2024-03-18	2024-03-24	43%	Hapus
7	design	pada minggu ke-tujuh ini, kelompok kami sudah fokus untuk membuat dan menyiapkan materi untuk melakukan presentasi yang berisi semua yang sudah kami lakukan selama pbl	-	2024-03-25	2024-03-27	51%	Hapus
8	Implementasi	Pada minggu ke - 8 ini, kelompok kami membuat codingan dan menambahkan fitur-fitur pada aplikasi mobile scale yang berfungsi untuk menjalankan aplikasi mobile scale dengan baik. Tapi disini kelompok kami tidak menyelesaikan codingan ini sepenuhnya	56	2024-03-28	2024-04-03	56%	Hapus
9	Implementasi	Pada minggu ke-9 ini, kelompok kami Melanjutkan codingan yang sudah kelompok kami buat sebelumnya dan menyempurnakan codingan	60	2024-04-08	2024-04-13	60%	Hapus
10	Implementasi	Pada minggu ke - 10 ini, kelompok kami Merangkai alat-alat dan bahan pada rangkaian arduino yang berfungsi untuk menjalankan aplikasi mobile scale	Rangkaian	2024-05-14	2024-05-19	64%	Hapus

ID	Tahapan	Detail Pengerjaan	Ouput	Mulai	Selesai	Progress	#
11	Implementasi	Pada minggu ke - 11 ini, kelompok kami melanjutkan rangkaian arduino yang telah kami buat dan kami juga menyolder beberapa wire yang masih belum lengket	Rangkaian	2024-05-20	2024-05-26	66%	Hapus
12	Implementasi	Pada minggu ke - 11 ini, kelompok kami melanjutkan penyolderan pada rangkaian arduino. Masih ada beberapa wire yang masih salah sambung dan masih salah penempatan.	Rangkaian	2024-05-27	2024-05-31	75%	Hapus
13	Desain	Pada minggu ke-13 ini, kelompok kami membuat desain poster yang berisi tentang aplikasi mobile scale untuk pengumpulan data terakhir pbl sambil menyempurnakan rangkaian arduino kami	Poster	2024-06-01	2024-06-08	90%	Hapus
14	Penyelesaian	Membuat laporan proyek akhir, membuat manual book, menyelesaikan aplikasi mobile scale dan berita serah terima	Laporan akhir proyek	2024-06-15	2024-06-22	100%	Hapus

APPENDIX II – TEAM SCHEDULE

The screenshot shows the 'Agenda Tim TRM-4C01' page. The left sidebar contains the user profile 'Yupiter Andrian Aritonang' and a menu with 'Home / Dashboard', 'Dashboard', 'Identitas', and 'Menu Mahasiswa'. The 'Menu Mahasiswa' section is expanded, showing 'Project Based Learning' with sub-items: 'Backlog Task', 'Blast!', 'Agenda', 'Board KANBAN', 'Logbook', and 'Berkas UTS/UAS'. The main content area displays a table with columns 'No', 'Agenda', 'Deskripsi', and 'Tanggal & Jam'. The table is currently empty. On the right, there is a user profile for 'Agung Riyadi, S.Si. M.Kom' and a comment input field with the placeholder text 'Press enter to post comment'.

APPENDIX III – PROJECT BOARD

The screenshot shows the 'Project Board' page. The left sidebar is identical to the previous screenshot. The main content area features a Kanban board with four columns: 'Backlog', 'To Do', 'In Progress', and 'Done'. Each column has a '+ Tambah' button and a circular icon at the bottom. The board is currently empty.

PROJECT DESCRIPTION

01

The Mobile Scale application is a program installed on a smartphone or tablet to weigh various objects, such as fruit, spices, and others, with a maximum weight of 10 kg.

This app allows users to easily and accurately measure the weight of objects. Users can also convert weight units between grams, kilograms, and ounces, as well as calculate the total weight of multiple objects individually.

The Mobile Scale app offers a variety of benefits, including ease of use, portability, accuracy, time-saving, and cost-saving. The app is ideal for use in the kitchen, store, or anywhere you need to weigh objects.

➤

CONTRIBUTION TO THE COURSE

02

SYSTEM IOT

Help us finishing hardware of our project.

GENERAL ENGLISH

Help us in acquiring vocabulary and in speaking.

STATISTIC

helping them to develop a better understanding of data, analyze problems, and make decisions supported by statistical evidence.

PKN

helps students understand the social context, develop critical awareness, understand government and legal systems, develop participation skills, and strengthen their social responsibility as responsible citizens.

ADMINISTRATION SYSTEM COMPUTER

Tell the command work function in ubuntu.

OBJECT PROGRAMING

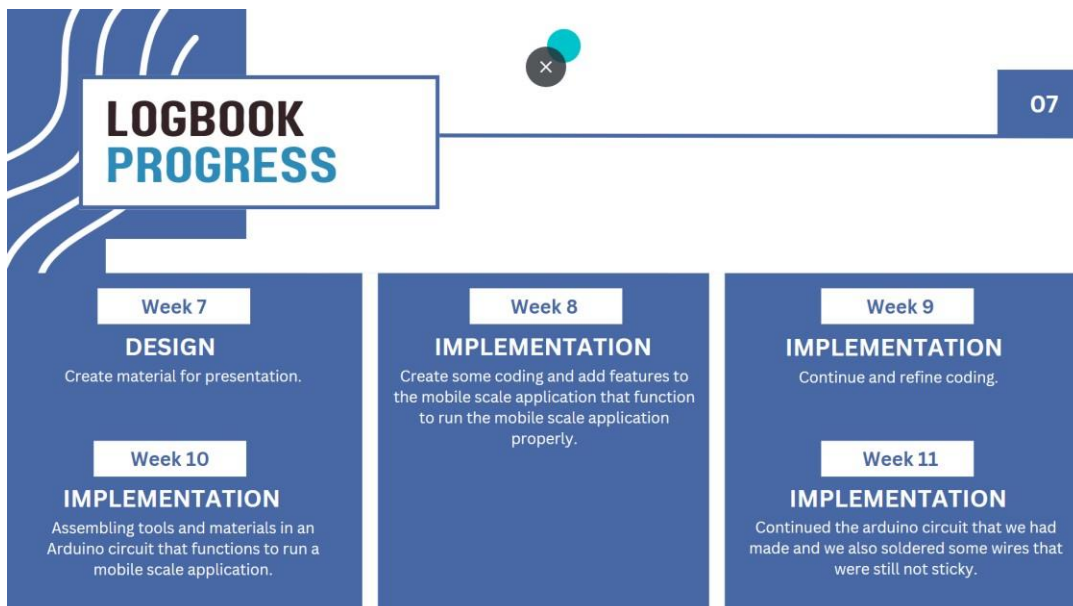

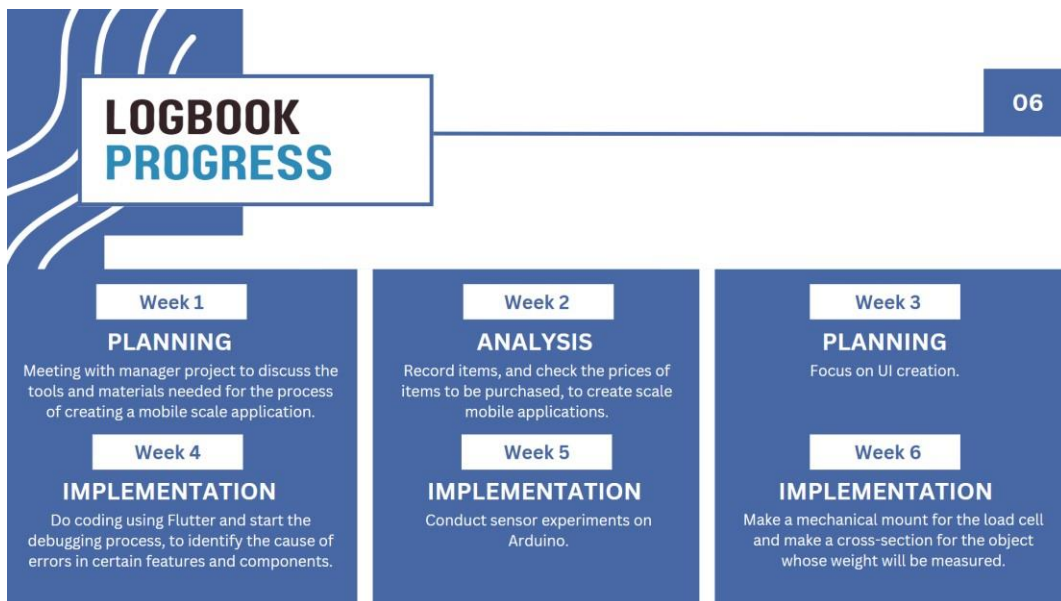

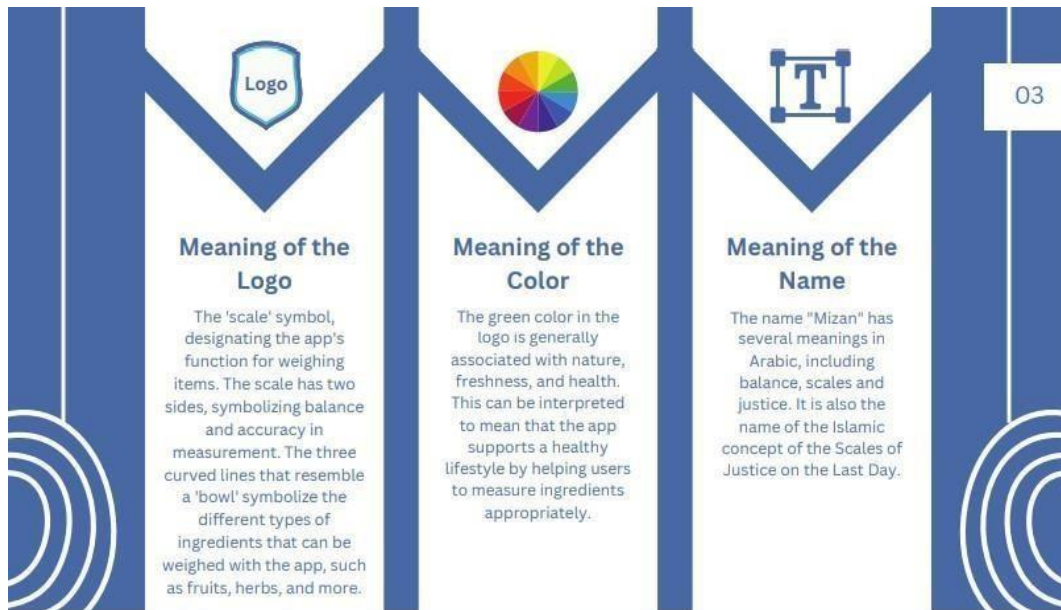

provides students with the necessary foundation to develop effective software solutions and understand the concepts underlying modern software development.

MOBILE DEVICE PROGRAMMING

provides students with the skills and knowledge necessary to develop mobile application solutions that are innovative, relevant, and effective in solving specific problems or case studies.

12

LOGBOOK PROGRESS

08

Week 12

IMPLEMENTATION

Continue soldering the arduino circuit. There are still some wires that are still wrongly connected and still misplaced.

Week 13

DESIGN

Create a poster design that contains and enhances our arduino array.

Week 14

IMPLEMENTATION

Make a final project report, make a manual book, complete the mobile scale application and handover news

09

PROJECT DETAILS

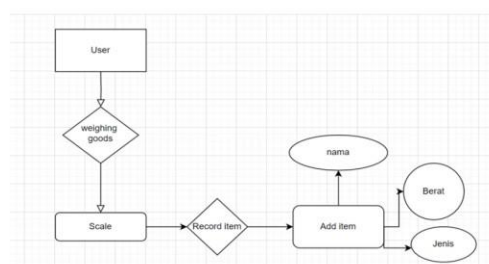

USE CASE AND ERD DIAGRAM

10

USECASE

ER DIAGRAM

FLUTTER CODING

11

```
1 import 'package:flutter/material.dart';
2 Run() Debug | Profile
3 id main() => runApp(MyApp());
4 class MyApp extends StatelessWidget {
5   @override
6   Widget build(BuildContext context) {
7     return MaterialApp(
8       home: Scaffold(
9         body: SafeArea(
10          padding: const EdgeInsets.all(20.0),
11          child: Column(
12            children: [
13              Text("Sign In", style: TextStyle(fontsize: 20)),
14              Image.asset('assets/images/SCALE.png'),
15              TextField(
16                decoration:
17                  InputDecoration(labelText: 'Email atau Nomor Telepon'),
18              ), // TextField
19              TextField(
20                obscureText: true,
21                decoration: InputDecoration(labelText: 'Kata Sandi'),
22              ), // TextField
```

```

24 TextButton(onPressed: () {}, child: Text("Lupa Kata Sandi?")),
25 Row(children: [
26   ElevatedButton.icon(
27     onPressed: () {},
28     icon: Icon(Icons.apple),
29     label: Text("Masuk dengan Apple"), // ElevatedButton.icon
30   ), ElevatedButton.icon(
31     onPressed: () {},
32     icon: Icon(Icons.mail),
33     label: Text("Masuk dengan Google") // ElevatedButton.icon
34   ), // Row
35 Row(children: [
36   Text("Baru di Mizan"),
37   TextButton(onPressed: () {}, child: Text("Daftar"))
38   ], // Row
39 ), // Column
40 ), // Padding
41 ), // SafeArea
```

DESIGN UI/UX HOME SCREEN

01 - Homepage

This is our homepage and bring up our scale app logo and our name logo is 'Mizan'.

02 - Get Started

When click 'get started', we directly move to login page.

12

DESIGN UI/UX DASHBOARD

03 - Dashboard

In dashboard page, there is measuring scales for measuring fruit and others. Then, there is the add weight data icon on fruits and others

04 - User Setting

Then, in the user settings menu, there is a lot of information for account data and there is an exit from the application.

13

IOT DEVICE

14

IoT mobile scale is an internet-connected digital scale equipped with a mobile app. It can measure the weight of objects and send the data to the mobile app for further analysis and storage.

PROBLEMS & SOLUTIONS

16

In our team, all are workers. This condition, makes it difficult for us to divide work time with study time.

First understand the obstacles that occur in the project process.

When there is a team meeting, sometimes one of us is unable to attend which results in communication constraints.

Doing time management as well as possible & Maintain communication.
